11. Your account: changing and recovering your password
12. What your role does not include (and why)
13. Support and contact

1. Your role: Administrator of your account

Welcome to **SentiCar**, your GPS tracking platform. Your user has the role of **Administrator of your own account**. This means you are in charge of everything that is yours, but only of what is yours:

- **You see and manage only your devices** and those of the accounts that hang below yours.
- **You can create users** within your account (drivers, supervisors, partners) and decide what each one sees.
- **You do not see other SentiCar customers**, and they do not see you. Your information is private.
- **You are not a “super administrator”** of the platform: that role belongs only to Sentinela, which operates the server.

In short

You own your account: you manage your devices and your own people (parent account and children), without touching or seeing anyone else's. It is your private, secure space inside SentiCar.

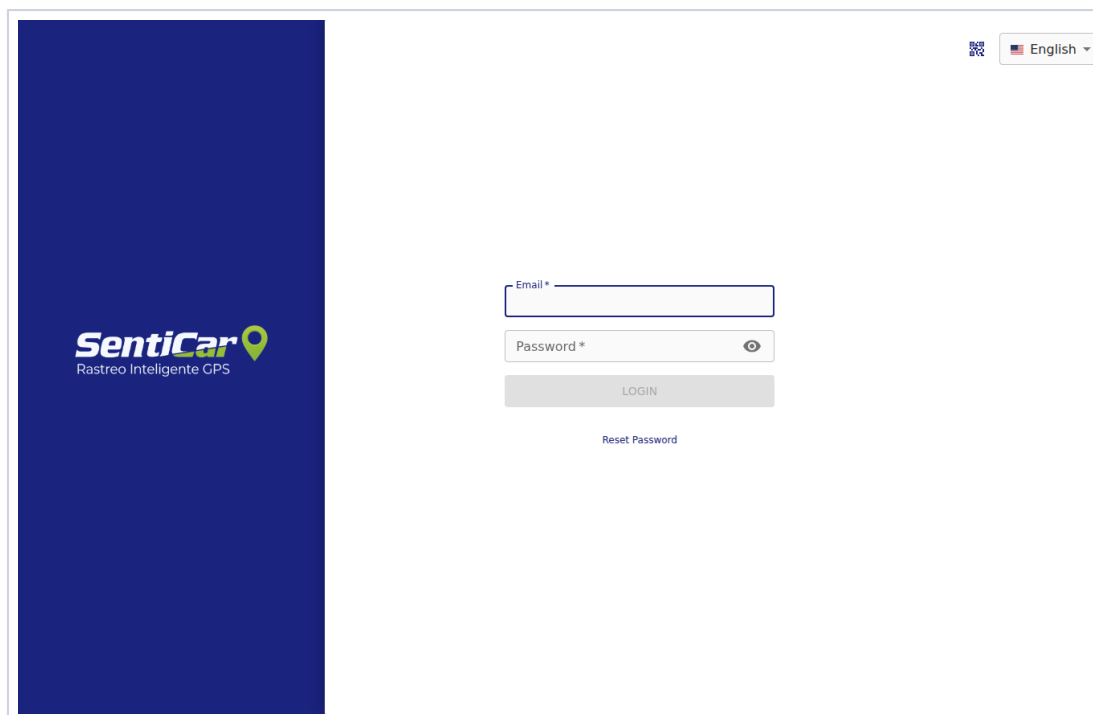

2. How to sign in

From a computer (recommended for management)

- Open your browser and go to **radar.senticar.com**.
- Enter your **email** (this is your username) and your **password**.
- Press **LOGIN**.

From your phone

Install the **SentiCar** app (Android) or open the same address in your phone's browser. The screen is the same, adapted to your display.

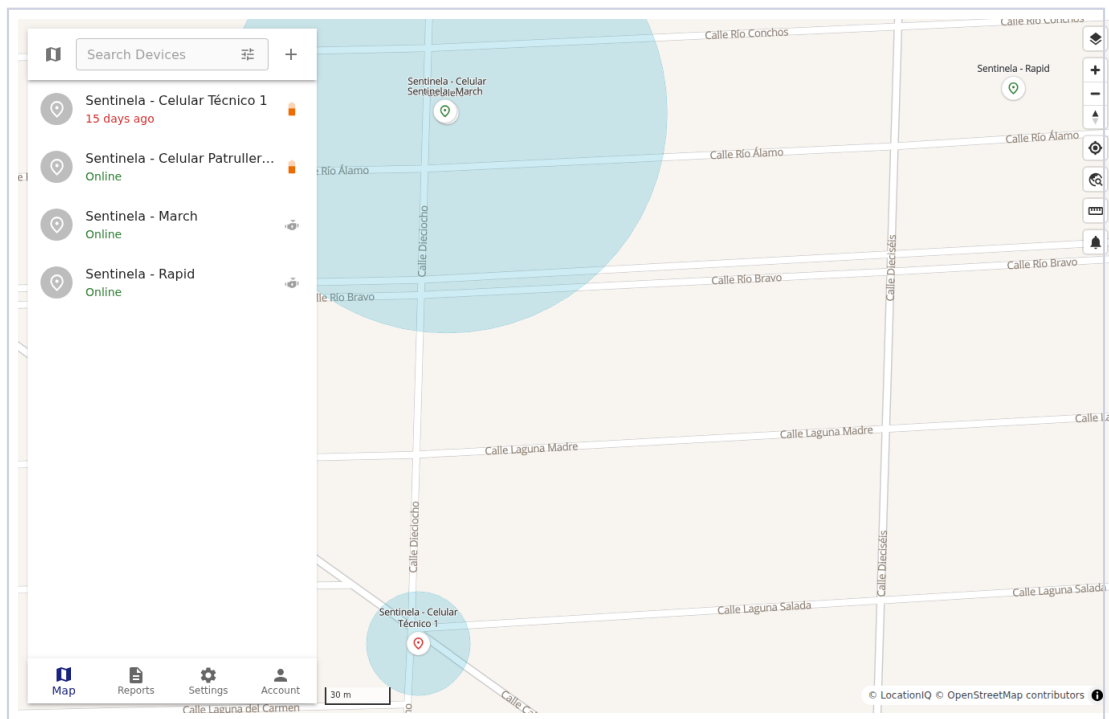

The screenshot shows the SentiCar login interface. On the left is a dark blue vertical bar containing the SentiCar logo and the text "Rastreo Inteligente GPS". The main area is white and contains a login form with two input fields: "Email *" and "Password *". Below the password field is a "LOGIN" button. Underneath the button is a link that says "Reset Password". In the top right corner, there is a language selector showing "English" with a dropdown arrow.

SentiCar sign-in screen. If you forgot your password, use “Reset Password” (see section 11).

3. The map and your device list

After signing in you will see the **map** and, on the left, the **list of your devices**. At the bottom is the main menu: **Map, Reports, Settings** and **Account**.

- **Online** (green): the device is reporting right now.
- **X days/hours ago** (red): the last time it reported (off, no signal or no battery).
- The **battery** icon on the right shows the device charge (on units that report it).
- Use “**Search Devices**” at the top to filter when you have many units.

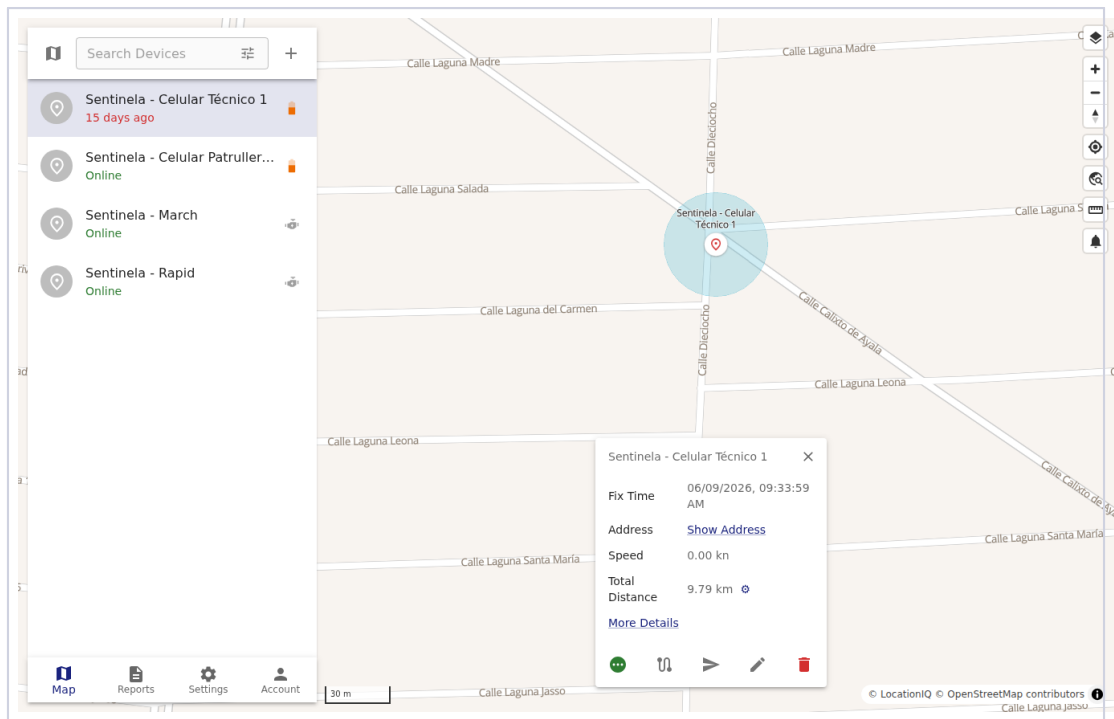

Main view: device list on the left, map on the right, menu at the bottom.

4. Viewing a device in detail

Click (or tap) a device in the list or on the map. A **card** opens with its information:

- **Fix Time:** date and time of the last report.
- **Address:** tap “Show Address” to see the street.
- **Speed** and **Total Distance** traveled.

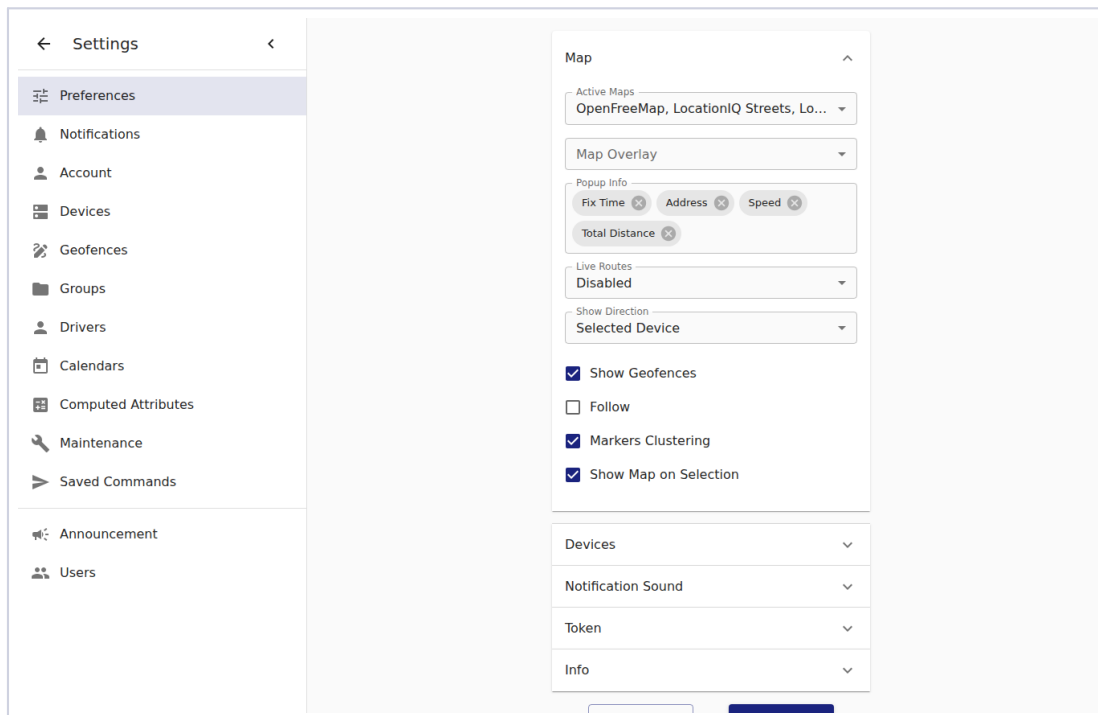

At the bottom of the card there are **action buttons** (left to right): more details, **route/replay**, **Share** (paper-plane icon), **edit** and delete.

Device card. The paper-plane icon (✈️) is “Share” — it creates a temporary link (section 6).

5. Following a device on the map

To make the map **follow** a moving device on its own (so you don’t have to re-center it), go to **Settings > Preferences** and turn on the “**Follow**” checkbox. You can also choose which data appears on the card (popup info) and group markers when many devices are close together.

Settings > Preferences. Turn on “Follow” so the map follows the selected device.

6. Sharing a location (temporary link)

You can share the live location of **one** device with anyone, **without giving them an account** and for a **limited time** (ideal so a cargo owner can follow their unit).

- Select the device to open its card.
- Tap the **Share** button (paper-plane icon ✉).
- Choose **how long** the link will stay active.
- Copy the link and send it via WhatsApp, email, etc.

Privacy

The link shows **ONLY** that device and stops working when the time expires. Whoever opens it cannot see the rest of your fleet and does not need a username or password.

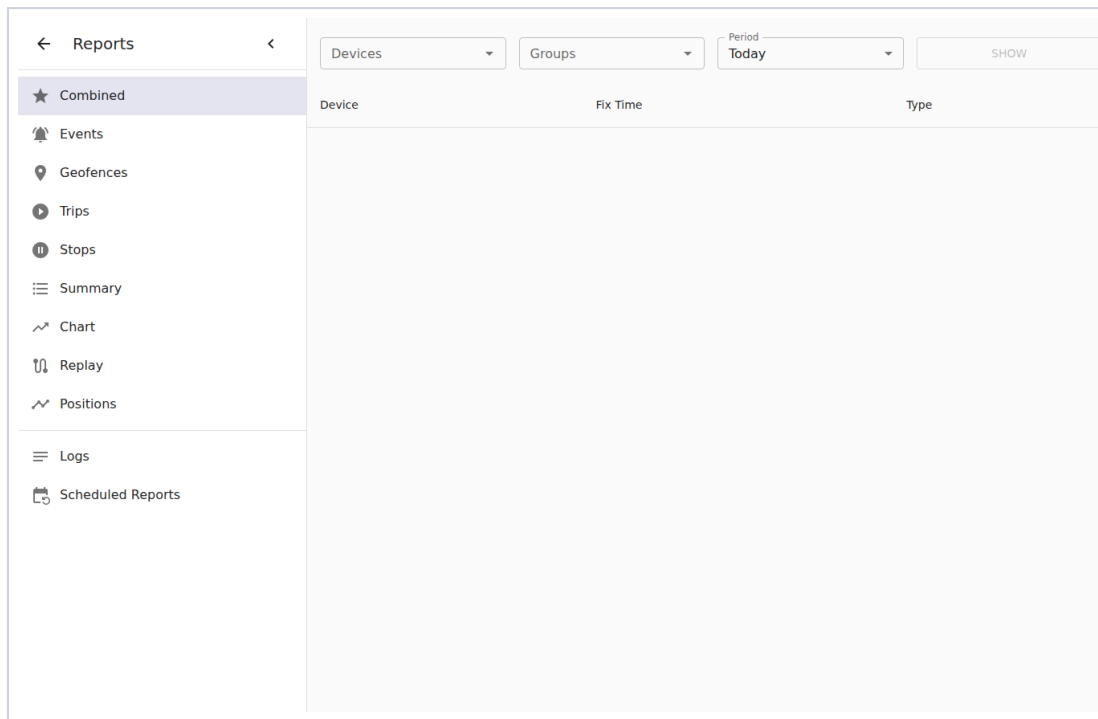

7. Reports

In the **Reports** menu you get the history of your devices. Available types:

- **Route / Route replay:** the path drawn on the map.
- **Summary:** distance, max/average speed and engine hours per day.
- **Trips** and **Stops:** where and how long it stopped.
- **Events** and **Geofences:** entries/exits and alerts.

How to generate a report

- Choose the **Device(s)** (or a Group).
- Choose the **Period** (Today, yesterday, this week or a date range).
- Press **SHOW**. You can **export the result to Excel**.

Reports menu: choose device, period and press SHOW.

8. Geofences and notifications

A **Geofence** is an area on the map (for example, your base or a customer's address). You can receive an **alert** when a device enters or leaves it.

- **Settings > Geofences:** draw the area on the map and name it.
- **Settings > Notifications:** choose which events alert you and through which channel (in-app, email, etc.).

9. Managing the users of your account

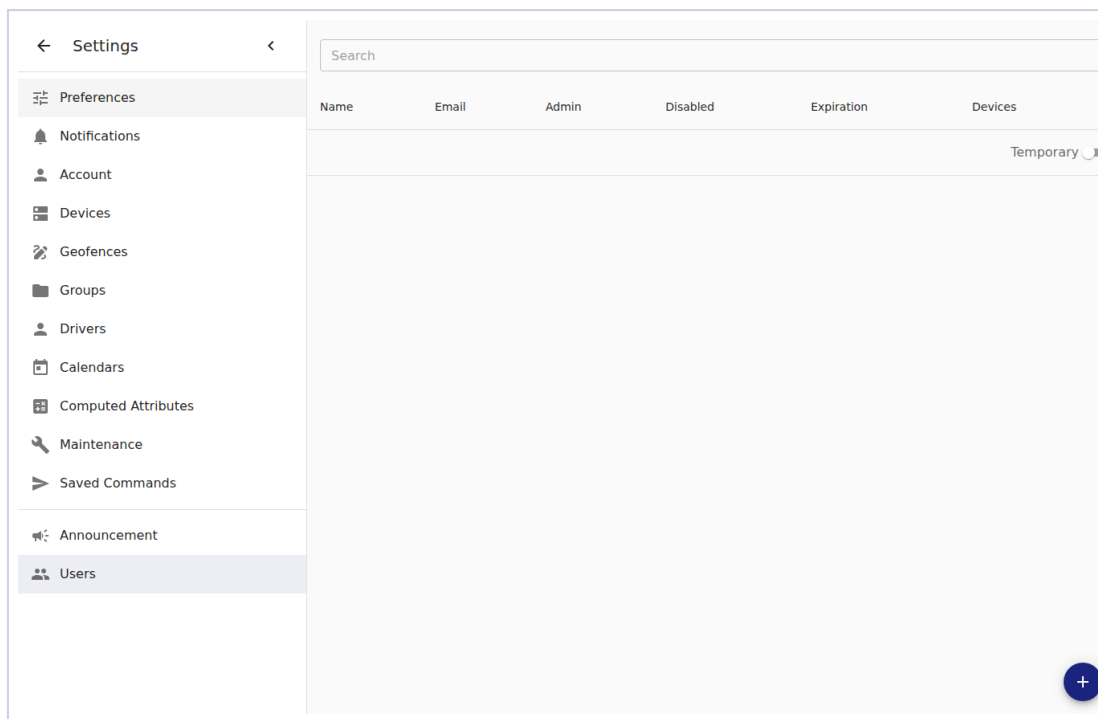

As the administrator of your account you can create **your own users** (drivers, supervisors, a partner) and decide which devices each one sees. Those users hang below you and **never see other accounts**.

Create a user

- Go to **Settings > Users**.
- Tap the **+** button (bottom right).
- Enter a **name**, **email** (it will be their username) and a **password**.
- Save. Then, on the user, link the **devices or groups** you want them to see.

Important

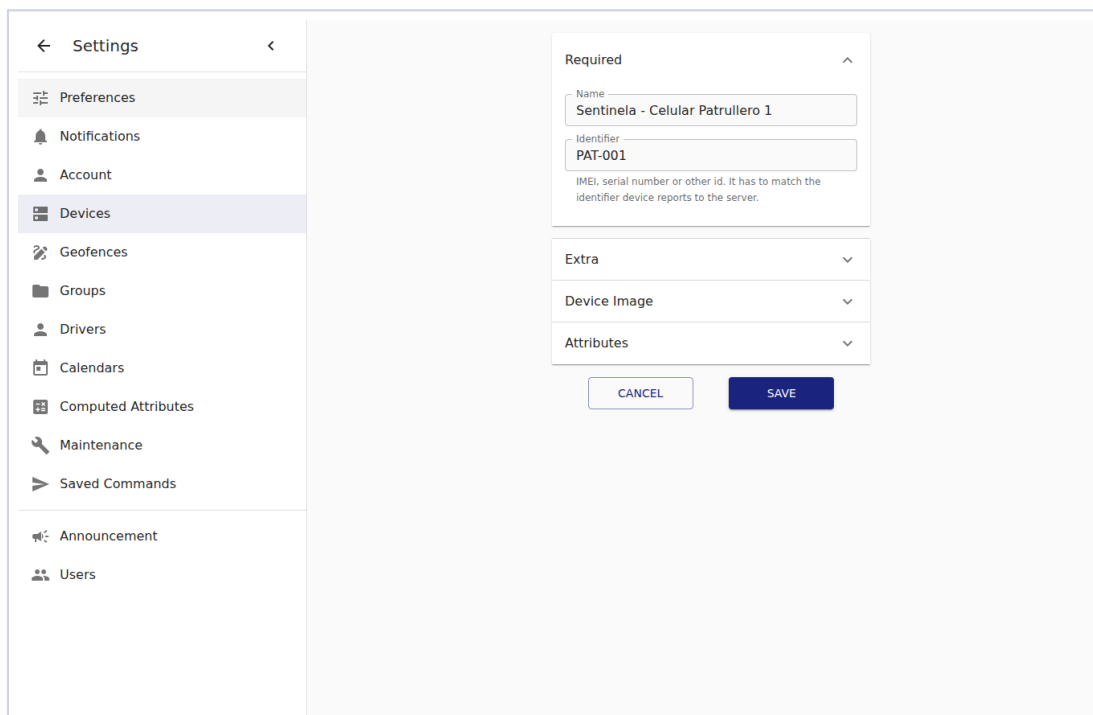

Always leave the **“Admin”** checkbox OFF for the users you create. Your users should belong to your account, not be administrators of the platform.

Settings > Users. The + button (bottom right) creates a new user of your account.

10. Editing a device

You can change a device's **name** so you recognize it easily (for example, "Sales Van" instead of a number). Go to **Settings > Devices**, choose the device and edit the **Name** field. The **Identifier** (the unit's IMEI or ID) is not changed: Sentinela sets it.

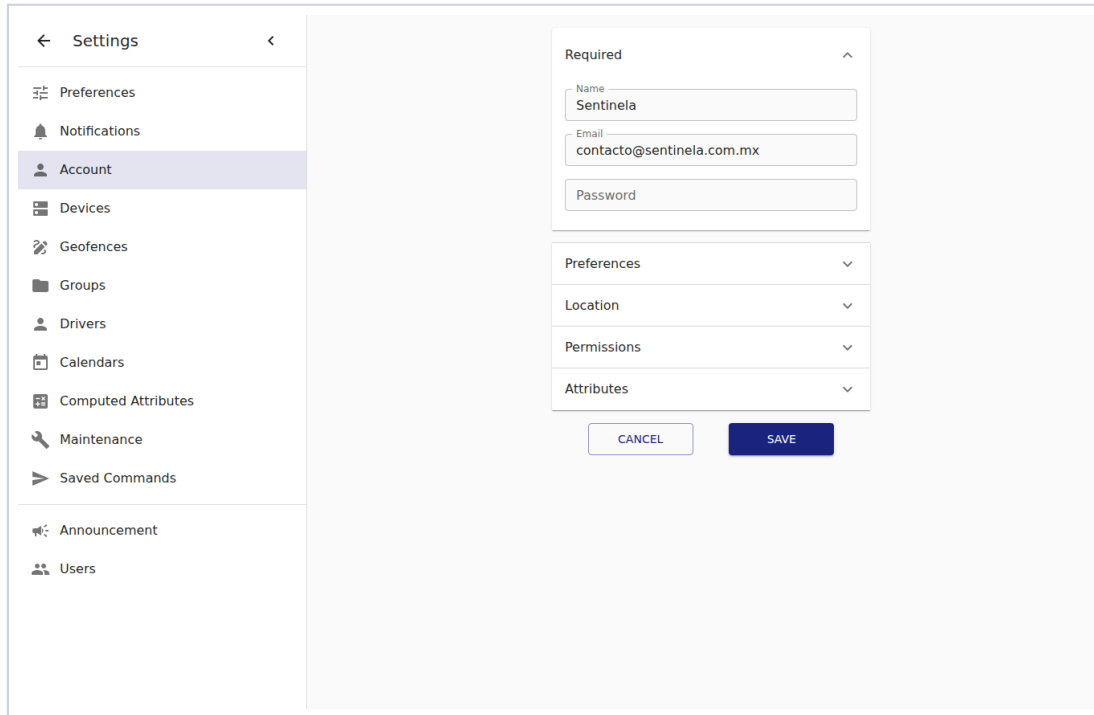

Editing a device: change the Name; the Identifier is managed by Sentinela.

11. Your account: changing and recovering your password

Change your password (while signed in)

- Go to **Account** (or Settings > Account).
- Type the new password in the **Password** field.
- Press **SAVE**.

Settings > Account: type the new password and SAVE.

Forgot my password

- On the sign-in screen, tap **Reset Password**.
- Enter your **email** (the same as your username) and submit.
- You will receive an email from **SentiCar** with a link to create a new password.

Note

The recovery email comes from an automated address (no-reply): do not reply to that message. For any questions use the support contacts (section 13).

12. What your role does not include (and why)

To protect your security and the platform's, your account has a few limits:

- **You do not send direct commands to the GPS hardware** (for example, engine cut-off). If you need a special command, Sentinela performs it for you.
- **You do not see or manage other customer accounts**; only yours and your users'.
- **You do not administer the server** or SentiCar's global configuration.

This protects you

These limits prevent costly mistakes and ensure no outsider sees your units. You are in charge of your account; Sentinela takes care of the infrastructure.

13. Support and contact

Web platform	radar.senticar.com
Mobile app	SentiCar (Android)
WhatsApp / Support	+52 868 822 5875
Email	gps@senticar.com (automated, no-reply)

Thank you for trusting **SentiCar — Smart GPS Tracking**, a Sentinela service.
